

Cam Morreale

DATA SCIENTIST

ABOUT ME

A highly innovative and motivated data science enthusiast, programmer, and blockchain enthusiast looking to leverage technology to solve real world problems

COMMUNITY INVOLVEMENT

- WPI blockchain club president
- WPI Data Science exec board member
- Chess instructor
- WPI alpine ski team
- Mass Fintech Hub mentorship program

SKILLS

- **Programming:** Python, Java, R, HTML
- **Supervised Learning:** logistic and linear regressions, support vector machines, decision trees
- **Unsupervised Learning:** k-means clustering and principal component analysis
- **Data Visualization and Natural Language processing**
- **Agile methodology**
- **SQL**

EDUCATION

Worcester Polytechnic Institute (WPI)
May 2024
Bachelors of Data Science
GPA: 3.51/4.0

Relevant Coursework: Data Structures, Algorithms, AI, Linear Algebra, Discrete Math, Probability & Statistics, Intro to Fintech, Data Science 1-3, Calculus 1-4

EXPERIENCE

Stock Market Simulation (IQP), WPI
January 2022 – May 2022

- Researched various strategies and techniques to invest in the stock market using the Investopedia simulator, an online program that mimics the market
- Implemented statistical analysis methods such as linear regression and hypothesis testing
- Outperformed the S&P 500 by 25% over an 8-week period by combining a strong understanding of the large-scale macroeconomic drivers of our economy with fundamental analysis, domain knowledge, and technical analysis

Paper recommender system, WPI
January 2023 – Present

- Developed a program that uses the contextual information of a document to find relevant papers
- Trained model using NLP similarity to find relevant papers in the 1987-2015 NIPS conference papers dataset when given an abstract
- Quantified results by comparing and contrasting with PageRank, and presented my results to a non-technical audience in an easily digestible manner

Worcester FAB LAB for social good (MQP), WPI
August 2022 – December 2022

- Developed a blockchain based solution that adds an additional layer of security to Embues' IoT network
- Applied ML models to detect over and under-heating within buildings
- Analyzed Lidar sensor data to predict hazards in public infrastructure
- Collaborated with industry sponsors Cyvl and Embue, as well as the Boston Blockchain Association and WorLab
