TR	WR 1020 - Introduction To Rhetoric	CR	3	3

2021 Fall Semester

Term	Course	Grade	Attempted	Earned
A21	DS 1010 - Data Science I: Introduction To Data Science	B	3	3
A21	ETR 1100 - Engineering Innovation And Entrepreneurship	B	3	3
A21	MA 1023 - Calculus III	A	3	3
B21	DS 2010 - Data Science II: Modeling And Data Analysis	B	3	3
B21	MA 2071 - Matrices And Linear Algebra I	B	3	3
B21	MA 2612 - Applied Statistics II	B	3	3

2022 Spring Semester

Term	Course	Grade	Attempted	Earned
C22	ID IQP - Stock Market Simulation 2103	A	7.5	7.5
D22	CDR IQP - Stock Market Simulation - IQP DZT- 2103	A	0	0
D22	CS 2223 - Algorithms	A	3	3
D22	ID IQP - Stock Market Simulation 2103	A	1.5	1.5

2022 Summer Semester

Term	Course	Grade	Attempted	Earned
E22	MA 1024 - Calculus IV	A	3	3

2022 Fall Semester

Term	Course	Grade	Attempted	Earned
A22	FIN 3300 - Finance, Risk Analytics & Technology	A	3	3
A22	ID PQP - FinTech Project B22 - Worcester IS FAB LAB for Social Good - Data Science, IoT and Blockchain	A	1.5	1.5
B22	CDR MQP - Worcester IS Fab Lab MQP Blockchain & Machine Learning Rpt	A	0	0
B22	DS MQP - FinTech Project B22 - Worcester IS FAB LAB for Social Good - Data Science, IoT and Blockchain	A	9	9
B22	PC 1000 - Project Center - FinTech	AT	0	0

2023 Spring Semester

Term	Course	Grade	Attempted	Earned
C23	PE 1201 - Alpine Ski Team	A	0.75	0.75
D23	DS 4635 - Data Analytics And Statistical Learning	A	3	3
S23	CS 534 - Artificial Intelligence	C	4.5	4.5
S23	DS 501 - Introduction To Data Science	B	4.5	4.5

2023 Fall Semester

Term	Course	Grade	Attempted	Earned
A23	BUS 2080 - Data Analysis For Decision Making	A	3	3
B23	CS 4342 - Machine Learning	A	3	3
B23	WR 2210 - Business Writing And Communication	A	3	3

2024 Spring Semester

Term	Course	Grade	Attempted	Earned
C24	MIS 3720 - Business Data Management	A	3	3
C24	WPE 1201 - Club Sport - Alpine Ski Team	A	0.75	0.75
D24	CDR HUA - Practicum: Advanced Science Writing	A	0	0
D24	HU 3910 - PRAC IN HUA: Advanced Science Writing	A	3	3
D24	MIS 510 - Business Application of Blockchain Tech	A	4.5	4.5
S24	MIS 584 - Business Intelligence	A	4.5	4.5

CDR IQP - Completion of Degree Requirement IQP**2022 Spring Semester****Grade: A****Stock Market Simulation - IQP DZT- 2103**

The goal of this project is to learn stock market trading strategies and get experiences by simulation. A seven-week stock market simulation was conducted using the simulation engine Investopedia. One member used Value and Recommendation trading for Simulation 1 and Crypto trading for Simulation 4. Another member used Position trading for Simulation 2 and Speculative trading for Simulation 3. Trading decisions were made using both fundamental analysis as well as deeper analysis based on each strategy that led to the results of +10.98% for Simulation 1, +9.20% for Simulation 2, +24.73% for Simulation 3 and finally +8.82% for Simulation 4. Performances from all the four simulations were better than that from the overall market which by the end of the simulation was only up 1.36%.

CDR MQP - Completion of Degree Requirement MQP**2022 Fall Semester****Grade: A****Worcester IS Fab Lab MQP Blockchain & Machine Learning Rpt**

Today's FinTech industry combines technologies, such as machine learning, data processing and blockchain. In Worcester MA, the Worcester IS FAB Lab utilizes blockchain and machine learning (ML) techniques to assist internet of things (IoT)-device based start-ups and support social good. The team delivered three different products to sponsors. First, the team utilized ML to help smart energy start-up Embue predict when apartment tenants opened their windows, saving energy by turning off the heat. The team also used ML to predict pavement deterioration for Cyvl, decreasing accidents associated with poor pavement conditions. Last, the team used blockchain to verify IoT devices for Embue.

CDR HUA - Completion of Degree Requirement HUA**2024 Spring Semester****Grade: A****Practicum: Advanced Science Writing**

For this humanities practicum in advanced science writing, I examined the profitability of algorithmic cryptocurrency day-trading bots. Specifically, I conducted a meta-analysis of eight studies exploring 7 different AI/ML algorithms. Results showed that the top algorithms are reinforcement learning (RL) and artificial neural networks (ANN). The top predictors for price prediction were volatility and the previous day's price movement. The RL approach beat the buy and hold by roughly 400% over a 66-month period, and ANN outperformed the buy and hold strategy by over 260% during a 30-day live trading period. Therefore, these results directly challenge the efficient market hypothesis, or the idea that excess profits cannot be made due to all known information being priced in.
